HYGIENICALLY DRY TOWEL AFTER EVERY BATH

Be kind to yourself, put an end to the unpleasant experience of having to re-use a damp towel. Bathroom Butler heated towel rails ensure you enjoy the experience of bathing even more by ensuring your towels are dry with a touch of warmth all year round.

WHY OWN A HEATED TOWEL RAIL

Look After Yourself

After experiencing the pure pleasure of having a dry towel every morning, with that comforting touch of warmth, you will never want to give it up.

Use less water, Save on electricity

Typically, used bath towels should be washed after every use to reduce bacterial build-up, which increases both water and electricity consumption. The smart alternative is to use a Bathroom Butler heated towel rail to dry your bath towels after every use, which means saving water and electricity with less washing.

A design feature that uses less wall space

Creating a central feature in your bathroom with the simple beauty of a heated towel rail won't take as much space as you may have thought. While towels on non-heated rails should be completely unfolded to try air dry, a towel on a heated towel rail should be folded twice to save space, trap heat and hygienically dry.

Hygienically Dry

Germs and bacteria build up on your bath towels when they don't dry properly, causing a damp musty smell. Drying your towel on a Bathroom Butler heated towel rail reduces the bacterial load by up to 90%, making that after shower stretch for your hygienically dry towel a simple pleasure.

Energy Efficient

Bathroom Butler heated towel rails use Dry Element Technology or DET which ensures quicker heat up times, reaching optimum temperature within 10min. With the wattage of the average size heated rail being the same as a single light bulb, they don't cost much to run either.

COMPLETE CONTROL AT YOUR FINGERTIPS

Integrated controllers on modern-day heated towel rails have become an absolute necessity that give you the choice and flexibility of temperature adjustment and reducing energy consumption.

A SECRET SWITCH THE ESSENTIAL ADDITION

The **Personal Temperature Selection Switch** or **PTSelect** is a discreetly built-in temperature control that allows you to adjust the temperature of the Bathroom Butler heated towel rail and to **switch it ON and OFF** for certain savings on electricity costs.

Features: Temperature Adjustment • ON / OFF Switch • RED LED Indicator

SEE THE SAVINGS THE ULTIMATE ADDITION

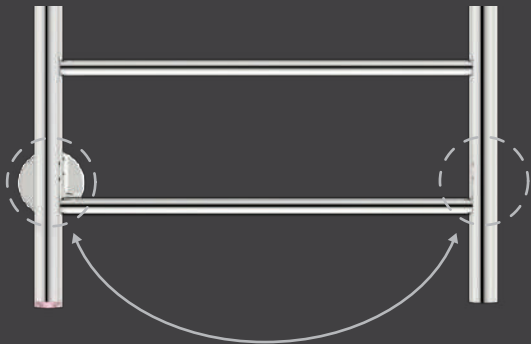

The Total Digital Control (TDC) Timer is a state-of-the-art digital control that can be programmed to run automatically in different modes of operation for up to 75% savings on running costs. See the real difference it makes on your power consumption.

Features: 4 On/Off programs in a 24hr period • Temperature Adjustment • 4 Modes of operation • Screen Auto-Lock • One button push - QUICK RUN • 24hr Clock

LEFT. RIGHT.
UPSIDE-DOWN.
DOWNSIDE UP

DUAL Entry - installation is so much easier and more straightforward with **both left and right electrical connections**; and you can now even choose to install your Bathroom Butler heated towel rail upside down to better suit your space or electric point.

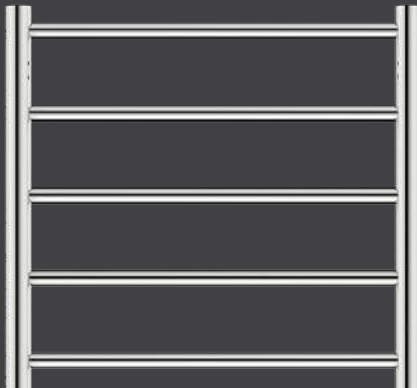

ADVANCED TECHNOLOGY

Dry Element Technology, also known as **DET** is **the pioneering** technology for heated towel rails. It works effectively in drying towels and provides un-paralleled benefits such as RAPID Heating, Direct Intelligent Heating, Controller Options and DUAL Entry electrical connections.

THE PERFECT MATERIAL CHOICE

Our heated towel rails are manufactured from **GRADE 304 Stainless Steel** which is the perfect choice material for the bathroom. Its inherent anti-corrosion properties prevent rusting, flaking, chipping, peeling and staining. GRADE 304 Stainless Steel is also non-porous and hygienic, it does not collect bacteria or algae and it is easy to clean.

KEEPING TOWELS DRY AND FRESH

Be kind to yourself, put an end to the unpleasant agony of having to reuse a damp towel. Bathroom Butler heated towel rails ensure consistently **dry and fresh towels all year round** even in humid, wet and cool climates.

SWITCH UP YOUR BATHROOM

Colour, shine and durability in every product made, selected models are now available in different finishes. We use innovative techniques to bring you colour choice from polished stainless steel, brushed stainless steel to brushed champagne gold and matt black. The finish is timeless.

THE DISTINCT ADVANTAGE OF DRY ELEMENT TECHNOLOGY AND RAPID HEATING

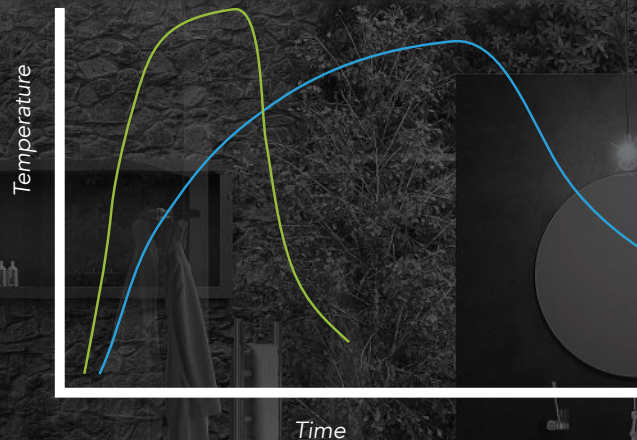

Turn on the Heat

Turn it on or turn it off. It only takes **10 - 15 minutes** for our heated towel rails to reach optimum working temperature. This is a feature called **RAPID Heating** and it makes it more efficient to turn on and off. Reducing running costs by 60%.

Dry Element Technology

Wet Element Technology
(Fluid Filled)

Dry Element Technology (DET) offers a wide range of benefits, including Rapid Heating, Direct Intelligent Heating, no fluid means there is no leaking, it is controllable, it is 100% serviceable, you can install it upside down, it is quiet in operation, and it is maintenance-free.

Personal Temperature Selection (PTS) Switch – This standard feature also allows the heated towel rail to be easily switched ON and OFF even though it is designed to run 24hrs a day. **Conserve energy** by up to 60% by reducing the temperature.

Total Digital Control (TDC) Timer – Instead of leaving the heated towel rail on 24hrs a day wasting energy, rather **conserve energy** by programming the heated towel rail to switch on only when needed. Also adjust to the temperature you desire for all year-round use.

DUAL Entry means that our heated towel rails are equipped with both LEFT – hand and RIGHT– hand electrical connections, conveniently located on the bottom mounting points.

Made from **GRADE 304 Stainless Steel** and hand polished to a mirror finish, our heated towel rails will neither rust nor flake thanks to the inherent corrosion resistance properties of this smart material.

All our **Stainless Steel** heated towel rails are covered by a **15 Year Limited Guarantee** against all material and manufacturing defects. Our replaceable heating elements are covered by our five year limited guarantee and both controllers are guaranteed for one year.
